

PHONE BOOTHS OUT OF THE STREETS AND INTO THE OFFICE!

Fifteen years ago we still had phone booths on our streets. But now they have all but disappeared from the urban landscape and found their way into new activity-based offices. This good old invention has been developed to meet today's needs.

Martela's range includes three different phone booth solutions designed for open-plan workspaces: Framery C, Framery O and Hush. These products, which can be installed retrospectively, provide an excellent solution for easy alteration of the workspace. Research conducted by the Finnish Institute of Occupational Health found that noise has a profound impact in an open-plan workspace and can decrease work efficiency by as much as ten per cent.

Experiences have shown that the phone booths' most important qualities are sound insulation, acoustics and usability. It is easy to pop into a phone booth to take a phone call that requires privacy or concentration. This is why many companies have decided to introduce these excellent solutions into their open-plan workspaces for both telephone and video conferences.

Framery C and Framery O

The Framery C and Framery O pre-constructed phone booths can easily be installed into new and existing offices. The installation is simple and only takes a moment.

The electric socket and LAN cable installed on the table top are also ideal for the video and telephone conferences that often require a laptop that are so common in office work today. The phone booths are designed so that the user is always facing the acoustic wall behind the table top. And ventilation is naturally an important feature of these phone booths.

Framery C has a sleek and simple design with neutral standard colours for the floor and the walls. The customer can select the colour of the table top to match the office surroundings, for example. Decal designs can be added to the glass walls of Framery C to help the booth blend into its surroundings.

Framery O, with its modern design, provides by far the best acoustics in the market. The booth comes with a table top and a leaning support on the wall. The customer can choose the exterior colour, and decal images can be used to alter the appearance of the phone booth.

Hush

Hush has a spacious and pleasant interior. There is a table for a laptop and other items, and it can also be equipped with electricity. Hush is not as deep as many of the similar products on the market, so it can be easily installed in corridors and entrance halls. You can also place Hush booths back to back, or whichever way you like – almost any combination is possible. When someone enters Hush, the lights and ventilation will start automatically.

Martela's range of three different phone booth designs is sure to provide you with the ideal solution for private phone calls in most types of open-plan workspace.
