

**Product** Alku High I-leg (499B11080200)

**Test requested by** Martela AB, Brogatan 1, SE-57161, Bodafors

**Test specimen**

Table top	2000x800 mm
Top material	22 mm chipboard
Frame	Steel tube
Leg	Steel

**Test method** Determination of strength, durability and safety of non-domestic table presented in the standard EN 15372: 2008 Furniture – Strength, durability and safety – Requirements for non-domestic tables. Selected type on usage was level 2.

Tests were carried out according to the standards below. Detailed test program with results is presented in pages 2-4.

**EN 15372:2008** Furniture. Strength, durability and safety. Requirements for non-domestic tables.

The test specimen was selected by Martela and arrived at Testing laboratory November 12, 2014. Tests were carried out November 19 - November 26, 2014 in temperature 23°C ± 2°C.

#### Assessment of results

Alku High I-leg table (499B11080200) with 2000x800 mm top meets the strength, durability and safety requirements of a non-domestic tables presented in the standards EN 15372:2008.

The test result is only valid to the specimen tested and no other.

This report may not be reproduced other than in full.

**Table1.** EN527-1:2011 Office furniture - Work tables and desks - Part 1: Dimensions

<b>EN 15372:2008 Furniture – Strength, durability and safety – Requirements for non-domestic tables</b>		
<b>5 Safety requirements</b>		<b>RESULTS</b>
(5.1) General	Edges of table tops which are directly in contact with the user are rounded or chamfered, and all other edges accessible during intended use are free from burrs and/or sharp edges.	OK
	Ends of hollow components are closed or capped.	OK
	Movable and adjustable parts shall be designed so that injuries and inadvertent operation are avoided.	OK
	It shall not be possible for any load bearing part of the table to come loose unintentionally.	OK
	All parts which are lubricated to assist sliding shall be designed to protect users from lubricant stains when in normal use.	N/A
(5.2.1) Shear and squeeze points when setting up and folding	Unless 5.2.2 or 5.2.3 are applicable, shear and squeeze points that are created only during setting up and folding are acceptable.	OK
	The edges of parts moving relative to each other and creating shear and squeeze points shall be as specified in 5.1.	
(5.2.2) Shear and squeeze points under influence of powered mechanisms	There shall be no shear and squeeze points created by parts of the table operated by powered mechanisms, i.e. springs, gas lifts and motorized systems.	N/A
(5.2.3) Shear and squeeze points during use	There shall be no shear and squeeze points created by forces applied during normal use. There shall be no shear and squeeze points if a hazard is created by the user during normal movements and actions, e.g. attempting to move the table.	OK
<b>5.3 Stability</b>		
(5.3.1.1) General	Tables that can be set to heights both above and below 950 mm shall be tested to both 5.3.1.2 and 5.3.1.3.	
(5.3.1.2) Test for tables that are or can be set to a height of 950 mm or less	The table shall be set to the height most likely to overturn the table, but not more than 950 mm. The table shall not overturn when tested according to Clause 6.7 of EN 1730:2000 using the forces specified within Table 2.	N/A
(5.3.1.3) Test for tables that are or can be set to a height greater than 950 mm	The table shall be set to the height most likely to cause overturning, but not less than 950 mm. The table shall not overturn when tested according to Clause 6.7 of EN 1730:2000 using 50 % of the specified forces.	OK
(5.3.2) Stability for tables with extension elements	The table shall not overturn when the vertical force specified is applied to the centre of the front of the table, through a loading pad.	N/A
